DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-17 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-17 are directed to a method which receives a plurality of sample streams representing signal measurements, manipulates the sample streams and generates waveform data with the sample streams. The claims recite a mathematical algorithm that generates waveform data from sample streams. A mathematical algorithm is an abstract idea and claims directed to an abstract idea must include limitations demonstrating a practical application by showing a physical transformation or by producing a result that is useful, concrete and tangible (US Patent and Trademark Office OG Notices 22 November 2005). The claims do not include limitations for a physical transformation or production of a useful concrete and tangible result and are therefore nonstatutory.

Allowable Subject Matter

3. Claims 18-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

4. Applicant's arguments filed 16 June 2006 have been fully considered but they are not persuasive. Applicant states that there is obviously a physical transformation of

sample data to display data, which produces a useful, concrete and tangible result in that it enables an operator to observe the characteristics of the signals being measured. However, the transformation of one type of data to another type of data is not a physical transformation since data is not a tangible thing. A physical transformation would require a change in the state of a physical object. Claims 18-21 produce a tangible result because the waveform is actually displayed. However, generating waveform data is simply part of the abstract mathematical algorithm.

5. Applicant's arguments, see pages 10 and 11, filed 16 June 2006, with respect to claim 1 have been fully considered and are persuasive. The rejections under 35 U.S.C. 102 and 35 U.S.C. 103 of claims 1-10 and 16 have been withdrawn.
